Via Africa Agriculture Grade

First Published in 1966. Routledge is an imprint of Taylor & Francis, an informa company.

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

The OECD-FAO Agricultural Outlook 2016-2025 provides an assessment of prospects for the coming decade of the agricultural commodity markets across 41 countries and 12 regions, including OECD countries and key agricultural producers, such as India, China, Brazil, the Russian Federation and Argentina.

This publication aims to inspire budding entrepreneurs in Africa to consider business opportunities in agriculture and agro-industry, broadly defined. It is intended to be a promotional tool, as a sort of call to arms, particularly for women and youth. It also aims to serve as an educational tool and knowledge product in business schools and entrepreneurship incubator programmes for case study-based learning on operating an agribusiness or agro-industry enterprise in Africa. The publication offers guidance to agripreneurs on how to overcome or avoid potential pitfalls and learn from the paths set out by the 12 agripreneurs, whose stories reflect real-life experiences of agribusiness development in Africa. It should be seen as a collection of resources on agripreneurship, focused on these four topical areas: scale, women, youth, and challenging environments, while providing guiding advice for agripreneurs and policy-makers. In addition to educating entrepreneurs, it is important to highlight the fundamental role of policy-makers in shaping the enabling environment for agripreneurship. In this context, the publication aims to provide concrete policy recommendations on how to improve the enabling environment for agripreneurship, based on the advice of the 12 agripreneurs featured here. The aim is to guide policy-makers to improve these targeted areas, and inspire them to do so by providing accounts of successful agripreneurs who have built businesses with positive
economic, social and environmental impacts on national development.

The subject of food security and land issues in Africa has become one of increased importance and contention over recent years. In particular, the focus has shifted to the role new global South donors - especially India, China and Brazil - are playing in shaping African agriculture through their increased involvement and investment in the continent. Approaching the topic through the framework of South-South co-operation, this highly original volume presents a critical analysis of the ways in which Chinese, Indian and Brazilian engagements in African agriculture are structured and implemented. Do these investments have the potential to create new opportunities to improve local living standards, transfer new technology and knowhow to African producers, and reverse the persistent productivity decline in African agriculture? Or will they simply aggravate the problem of food insecurity by accelerating the process of land alienation and displacement of local people from their land? Topical and comprehensive, Agricultural Development and Food Security in Africa offers fresh insight into a set of relationships that will shape both Africa and the world over the coming decades.

African agriculture is currently at a crossroads, at which persistent food shortages are compounded by threats from climate change. But, as this book argues, Africa can feed itself in a generation and can help contribute to global food security. To achieve this Africa has to define agriculture as a force in economic growth by advancing scientific and technological research, investing in infrastructure, fostering higher technical training, and creating regional markets.

At the height of the Cold War, Soviet ideologues, policymakers, diplomats, and military officers perceived the countries of Africa, Asia, and Latin America as the future reserve of socialism, holding the key to victory over Western forces. The zero-sum nature of East-West global competition induced the United States to try to thwart Soviet ambitions. The result was predictable: the two superpowers engaged in proxy struggles against each other in faraway, little-understood lands, often ending up entangled in protracted and highly destructive local fights that did little to serve their own agendas. Using a wealth of recently declassified sources, this book tells the complex story of Soviet involvement in the Horn of Africa, a narrowly defined geographic entity torn by the rivalry of two large countries (Ethiopia and Somalia), from the beginning of the Cold War until the demise of the Soviet Union. At different points in the twentieth century, this region—arguably one of the poorest in the world—attracted broad international interest and large quantities of advanced weaponry, making it a Cold War...
flashpoint. The external actors ultimately failed to achieve what they wanted from the local
countlicts—a lesson relevant for U.S. policymakers today as they ponder whether to use force
abroad in the wake of the unhappy experiences in Iraq and Afghanistan.

Emerging? (or ?black?) farmers are often considered a homogeneous group. While
individual emerging farmers and agribusinesses in South Africa share a common history,
the case studies in this book show that in fact significant differences exist among them
that are often hidden beneath the averaging and aggregation typical of most analytical
research. Presenting fifteen case studies of emerging agribusinesses in South Africa, this
book has three main objectives: (1) to capture the human stories behind the emerging
farms and agribusinesses in South Africa in order to showcase their rich diversity,
historical backgrounds, current context, and future directions; (2) to highlight the best
practices, opportunities, and challenges facing South Africa's emerging farmers and
agribusinesses; and (3) to create a new set of instructional materials for academics and
development practitioners, or as a point of reference for other entrepreneurs, members of
government, and other practitioners engaged in agriculture and agribusiness. The case
study format, a relatively new tool in the field of agribusiness management, allows for a
close-up view of the entrepreneurs at the heart of the businesses, providing an ideal lens
through which to take a snapshot of the agribusiness landscape of South Africa today.
This cutting-edge international book brings together leading experts' latest research in
the field of family tourism by adding to its underdeveloped knowledge base. Family
Tourism: Multidisciplinary Perspectives underlines the infancy of academic family
tourism research that belies its market importance and directs towards future
implications and theoretical debates about the place of families within tourism.
According to estimates by the International Land Coalition based at the International
Fund for Agricultural Development (IFAD), 57 million hectares of land have been leased
to foreign investors since 2007. Current research has focused on human rights issues
related to inward investment in land but has been ignorant of water resource issues and
the challenges of managing scarce water. This handbook will be the first to address
inward investment in land and its impact on water resources in Africa. The geographical
scope of this book will be the African continent, where land has attracted the attention of
risk-taking investors because much land is under-utilised marginalized land, with
associated water resources and rapidly growing domestic food markets. The successful
implementation of investment strategies in African agriculture could determine the future
of more than one billion people. An important factor to note is that sub-Saharan Africa will, of all the continents, be hit hardest by climate change, population growth and food insecurity. Sensible investment in agriculture is therefore needed, however, at what costs and at whose expense? The book will also address the livelihoods theme and provide a holistic analysis of land and water grabbing in sub-Saharan Africa. Four other themes will addressed: politics, economics, the environment and the history of land investments in sub-Saharan Africa. The editors have involved a highly diverse group of expert researchers, who will review the pro- and anti-investment arguments, geopolitics, the role of capitalist investors, the environmental contexts and the political implications of, and reasons for, leasing millions of hectares in sub-Saharan Africa. To date, there has been no attempt to review land investments through a suite of different lenses, thus this handbook will differ significantly from existing research and publication. The editors are Tony Allan, (Professor Emeritus, Department of Geography, School of Oriental and African Studies and King's College London); Jeroen Warner (Assistant Professor, Disaster Studies, University of Wageningen); Suvi Sojamo (PhD Researcher, Water and Development Research Group, Aalto University); and Martin Keulertz (PhD Researcher, Department of Geography, London Water Group, King's College London).

This book looks at Generation Y in a tourism context; in broad conceptual terms such as trends and behaviour, and in applied terms, for example looking at particular types of travel that Generation Y takes part in, and tourism marketing aimed specifically at them. Benckendorff/M oscardo, James Cook Uni, Pendergast, Griffith Uni, Aus.

Thanks to breakthroughs in production and food science, agribusiness has been able to devise new ways to grow more food and get it more places more quickly. There is no shortage of news items on hundreds of thousands of hybrid poultry – each animal genetically identical to the next – packed together in megabarns, grown out in a matter of months, then slaughtered, processed and shipped to the other side of the globe. Less well known are the deadly pathogens mutating in, and emerging out of, these specialized agro-environments. In fact, many of the most dangerous new diseases in humans can be traced back to such food systems, among them Campylobacter, Nipah virus, Q fever, hepatitis E, and a variety of novel influenza variants. Agribusiness has known for decades that packing thousands of birds or livestock together results in a monoculture that selects for such disease. But market economics doesn't punish the companies for growing Big Flu – it punishes animals, the environment, consumers, and contract farmers. Alongside growing profits, diseases are permitted to emerge, evolve, and spread with little check. “That is,” writes evolutionary biologist Rob Wallace, “it pays to produce a pathogen that could kill a billion people.” In Big Farms Make Big Flu, a collection of dispatches by turns harrowing and thought-provoking, Wallace tracks the ways influenza and other pathogens emerge from an agriculture controlled by multinational corporations. Wallace details, with a precise and radical wit, the latest in the science of agricultural epidemiology, while at the
same time juxtaposing ghastly phenomena such as attempts at producing featherless chickens, microbial time travel, and neoliberal Ebola. Wallace also offers sensible alternatives to lethal agribusiness. Some, such as farming cooperatives, integrated pathogen management, and mixed crop-livestock systems, are already in practice off the agribusiness grid. While many books cover facets of food or outbreaks, Wallace's collection appears the first to explore infectious disease, agriculture, economics and the nature of science together. Big Farms Make Big Flu integrates the political economies of disease and science to derive a new understanding of the evolution of infections. Highly capitalized agriculture may be farming pathogens as much as chickens or corn.

South African national bibliography

In a vast and all-embracing study of Africa, from the origins of mankind to the AIDS epidemic, John Iliffe refocuses its history on the peopling of an environmentally hostile continent. Africans have been pioneers struggling against disease and nature, and their social, economic and political institutions have been designed to ensure their survival. In the context of medical progress and other twentieth-century innovations, however, the same institutions have bred the most rapid population growth the world has ever seen. Africans: The History of a Continent is thus a single story binding living Africans to their earliest human ancestors.
